

WHAT IS CLAIMED IS

1. A platform for a motorcycle, the platform comprising: at least two brackets, each bracket including at least two mounts, one of the mounts being coupable to a frame component of the motorcycle; a contoured surface attached to each bracket via at least two arms, the contoured surface following the contour of a motorcycle fender and forming a gap between the motorcycle fender and the contoured surface, the gap protecting the surface of the motorcycle fender.
2. Size, shape, material and design may change for a different model.
What is claimed is the concept of a load bearing bracket attached to the frame following the fender contour without making contact with the fender finish thus far unaccomplished without bracing to the rear axle.
3. A bracket for coupling an armrest seat back hereto, the bracket having a v-shaped configuration.
4. A bracket for coupling a sissy bar, the bracket having a v-shaped configuration.
